

PRESS RELEASE

Lutronic Factory in China under New Name

Schalksmühle, 01.10.2022. Lutronic specializes in connectivity solutions for industrial automation. The portfolio also includes high-performance feeding, testing and handling modules for special machine construction.

The company operates in conjunction with the specific know-how of the Lumberg Group that established the M12 circular connector as a global standard in the early 1980s. On this basis, Lutronic, as a sister company to the Lumberg Group, exclusively develops and sells high-quality M8 and M12 circular connectors for signal, data and power applications for automation applications.

While the focus is initially on standardized overmolded cables, this also includes more and more customized cabling for signal, data and power applications. Here, Lutronic niches the growing market that the market leaders are opening up by claiming ever higher minimum order quantities and, above all, by abandoning individual small quantities.

The products grouped in the “Connectivity” business unit are manufactured at the Dongguan factory in China. Effective January 1, 2021, Lutronic had purchased its long-standing production plant in China. In order to refer to Lutronic as the parent company, the company there now operates under the new name “Lutronic TCA Electronics Dongguan Co., Ltd.”, or 陆创尼德思奥电子（东莞）有限公司 in national language.

Lutronic TCA currently employs around 330 people in Dongguan. The approximately 12,000 square meter production, warehouse and office space are conveniently located just two hours from Shenzhen and Hong Kong in a center of the Chinese electrical industry.
